

Deployment is underway!

Introduction to C-ITS
corridor deployments

Torsten Geissler, BASt
15 September 2015, Roskilde

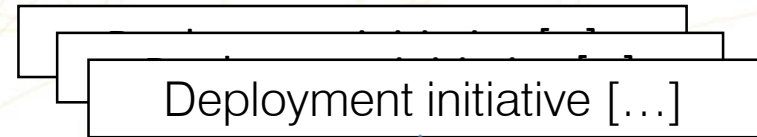

Interaction between Amsterdam Group and corridor deployments

Get It In On The Road, Get It In the Vehicle.

- Roadmap between automotive industry and infrastructure organisations,
- Roadmap on initial deployment of Cooperative ITS (C-ITS) in Europe from 2015 onwards,
- Roadmap aims at practical recommendations for AG members,
- Roadmap on AG level as a guiding star for C-ITS deployment of members in corridors.

Growing network of initial deployment

- Elements of coherent deployment
 - Shared view on some of the day one services (examples: Road Works Warning, In-vehicle signage, Probe Vehicle Data)
 - Although services may be implemented in a slightly different way
- Wider scope of deployment
 - Technologically: NordicWay focus on cellular communication
 - Geographically: urban C-ITS included
 - Modal: freight and logistic services addressed
- Need for a service catalogue
 - Starting with Day One services
 - Gradually to be expanded
 - Can be covered by open issues task forces

Synchronisation and Networking

- Timing of the deployment initiatives
 - Broader wave of pilot deployments within next three to four years
 - Potentially followed by another wave (similar to US)
- Networking of corridors via Amsterdam Group and CODECS
 - Interoperability of C-ITS deployments
 - Unique opportunity to bring together domain experts from the corridor deployments to share information as well as to discuss and mitigate possible divergent approaches
 - Cross testing – growing interest and facilities
- European Commission activities
 - Framing role via Cooperative ITS Deployment Platform
 - Incentivising role via CEF co-funding and Horizon 2020 funding
